# Mechanical and Electro-Mechanical Product Solutions by Danaher Motion

## New Name, Established Brands

Danaher Motion's wide range of motion control systems and components offer customers an unprecedented choice in selecting the right solution to match their particular application requirements. Our product innovations have been improving the efficiency and productivity of complex manufacturing operations for over 60 years through trusted brand names such as Dover, Kollmorgen, Pacific Scientific, Portescap and Thomson in industries as diverse as semiconductor, aerospace and defence, mobile-off-highway, packaging, medical and robotics.

In addition, Danaher Motion, through Motion Engineering (MEI), offers powerful integrated motion control solutions with its industry-leading, multi-axis motion platforms and SynqNet™ communications network for ultra-reliable machine performance. From software and controller, through the communications network to drives and I/O devices, to mechanical and electro-mechanical products, Danaher Motion differentiates itself in the marketplace by designing standard and custom solutions to satisfy the most demanding application requirements.

Our growing family of leading motion control products and application expertise tells only half the story. With a worldwide service and support infrastructure, our field service engineers and support teams are available to assist whenever they are needed. It is part of Danaher Corporation's unrelenting focus on its customer. That's why more and more design engineers are turning to Danaher Motion to meet their motion control requirements.

### Danaher Motion Values

- Application Expertise
- Broad & Innovative Motion Control Products and Systems
- Customer Focus
- Customisable Products and Services
- Motion Control Pioneers with Global Staying Power
- Operational Excellence

**KOLLMORGEN**

**Portescap**

**THOMSON**

## Rugged and reliable

Thomson Tollo linear actuators incorporate strong, high quality components that has been proven under the hardest operation conditions to ensure a long and trouble free operation.

Rugged spur gearings, aircraft quality lubricants, non corrosive extension tube and high performance motors with built in thermal protection maximum the life and value for the user.

## Linear actuator advantages

A Thomson Tollo actuator with 100 mm stroke can provide 6800 N of force from a 300 mm long package. This means that pneumatic and hydraulic cylinders easily can be replaced thus saving energy, space and power sources while making control easier and accurate positioning possible.

The actuators will operate equally well if pulling or pushing the load. They hold a load indefinitely without power and can be equipped with position feedback devices, limit switches and other optional functions and features.

## Broad range of models

The broad range of models makes it easy to choose the perfect actuator for your application. We can offer an actuator whether it should be small, fast, quiet, strong, wheater protected or light weight. And if you can not find anything that fits among our standard range we are happy to customize an actuator to your needs.

## Typical applications

Applications areas where linear actuators are used includes:

- Mobile-off-Highway equipment (harvesters, tractors, trucks, bailers, forestry vehicles, trains, construction equipment, boats, etc.)
- Health and fitness equipment (x-ray equipment, wheel chairs, handicap adaption of cars, gym equipment, dental chairs, patient lifts, etc.)
- In ventilation and valve control
- In the operation of windows, gates, doors and hatches
- In all type of industrial equipment where linear motion is a need.

## Actuators

Actuator model	Max. load [N]	Max. stroke [mm]	Max. speed [mm/s]	Available supply voltages		Available screw types			Overload clutch		End of stroke limit switches		Anti rotation mechanism

## Electrak LA series

- Strong, rugged and reliable
- Ball screw or acme screw drive
- DC or AC power supply
- Stroke up to 600 mm
- Speed from 12 to 75 mm/s
- Load up to 6800 N

**PAGE 7**

## Electrak PPA series

- Robust and versatile
- Ball screw drive
- DC or AC power supply
- Stroke up to 914 mm
- Speed from 5 to 28 mm/s
- Load up to 6670 N

**PAGE 29**

## Electrak E series

- Lightweight, low noise and space saving
- Low cost
- Stroke up to 400 mm
- Speed up to 70 mm/s
- Load up to 2000 N
- Non corrosive

**PAGE 39**

## Movoact

- Self supporting lifting column with extruded aluminium housing
- Ball screw or acme screw drive
- DC or AC power supply
- Stroke up to 600 mm
- Speed from 12 to 60 mm/s
- Load up to 6800 N

**PAGE 47**

## LoadMaster 80

- Rodless actuator for horizontal or vertical use
- Quiet operation for indoor domestic or medical applications
- Trapezoidal or ball screw drive
- Stroke up to 1500 mm
- Speed up to 110 mm/s
- Load up to 2000 N

**PAGE 53**

## Controls

- Controls available for all actuator models
- Models for AC or DC power supply
- Versions with limit switch inputs
- Versions with electronic limit switches (ELS)
- Models with outputs for one or two actuators
- Hand controls available for some models

**PAGE 59**

## Basic actuator design

## Technology overview

### Anti coast brake

Ball screw actuators with an AC motor can, depending of the load, overrun before it comes to a complete stand still after the power is being switched off. This overrun is eliminated by the anti coast brake option.

### Anti rotation mechanism

The anti rotation mechanism prevents the extension tube from rotating at the end of stroke thus eliminating the restraining torque.

### Duty cycle

The duty cycle is the allowed time in percent of the total time that the actuator may be working at the maximum rated load at a specified temperature. Example: a duty cycle of 25 % at 25° C means that a unit that runs for 10 second must be off for 30 seconds ( $10 / (10+30) = 25\%$ ) if the temperature is 25° C and it runs at max. rated load. The duty cycle may be higher if the temperature is lower or/and the load is less than maximum.

### ELS - Electronic Limit Switches

ELS which stands for Electronic Limit Switches and is a current sensing function used in some actuator control models. The function sense the current and if the current exceeds a pre-set level in any direction the control cuts the power to the motor in that particular direction. This function can be used to detect and stop at the ends of the actuator stroke or to stop the actuator if it runs into an obstacle.

### IP code

The IP code describe how well the actuator is protected from objects and water.

IP33: protected against the penetration of solid objects having a diameter greater than 2,5 mm and from rain at an angle up to 60°.

IP44: protected against the penetration of solid objects having a diameter greater than 1 mm and from splashing water in all directions.

IP45: protected against the penetration of solid objects having a diameter greater than 1 mm and from water jets in all directions.

IP51: protected from dust and vertical dripping water (condensation).

IP56: protected from dust and jets of water and waves in all directions.

IP65: dust tight and protected against water jets in all directions.

### Limit switches

There are two types of limit switches. The "end of stroke limit switches" stops the motion at the end of the stroke while the "adjustable limit switches" can be set to stop the motion at any desired position along the stroke.

### Maximum operation time

The maximum operation time is the max. time that the actuator may work before it must stand still with the power switched off. If the duty cycle is 25 % and the max. operation time is 45 seconds then the actuator may run for 45 seconds before it must stand still for 180 seconds.

### Position feedback option

The position feedback can either be obtained by a potentiometer or a hall effect sensor. In the first case a potentiometer in the actuator linearly changes resistance in accordance with the position of the extension tube. In the second case a hall effect sensor generates a pulse every 0,84 mm of extension tube travel. In both cases the resistance/pulses are measured/counted by a customer supplied control.

### Restraining torque

Restraining torque is the torque that the load and the holding brackets must withstand so that the extension tube moves instead of rotate. Actuators with "anti rotation mechanism" do not have any restraining torque as they are restrained internally.

### Spline safety function

The spline safety function is an optional safety function on LoadMaster 80 that will stop downwards motion in case the carriage (the moving member) collides with an obstacle. The motor will keep running but the carriage will stand still. When reversing the motor rotation the carriage will automatically start to move upwards again.

## Elektrak LA1-S

- IP65
- 12, 24 or 36 Vdc power supply
- Stroke from 25 to 150 mm
- End of stroke limit switches
- Self locking acme screw

## Elektrak LA1-SP

- IP65
- 12, 24 or 36 Vdc power supply
- Stroke from 50 to 150 mm
- Potentiometer feedback (no limit switches)
- Self locking acme screw and anti rotation mechanism

## Electrak LA10

- IP65
- 12, 24 or 36 Vdc power supply
- Standard stroke up to 600 mm
- Ball or acme screw
- Custom RAL color possible.

## Electrak LA14

- IP65
- 12, 24 or 36 Vdc power supply
- Standard stroke up to 600 mm
- Ball or acme screw
- Anti rotation mechanism
- Aluminium cover tube with T-slot.

## Electrak LA5

- IP45
- 1 x 230 Vac or 3 x 400 Vac power supply
- Standard stroke up to 600 mm
- Ball or acme screw
- Custom RAL color possible.

## Electrak LA24

- IP45
- 1 x 230 Vac or 3 x 400 Vac power supply
- Standard stroke up to 600 mm
- Ball or acme screw
- Anti rotation mechanism
- Aluminium cover tube with T-slot
- Version without motor available (ElectrakFA14).

## Technical data

Available input voltages [Vdc]	12, 24 or 36
Available screw types	Acme
Max. static load at fully retracted [N]	1300
Min. / max. standard stroke [inch]	
S-model	1 / 6
SP-model	2 / 6
Duty cycle @ 25° C [%]	25
Temperature limits at operation [°C]	- 25 to + 65
Protection degree	IP65
Max. end play [mm]	0,9
Restraining torque [Nm]	
S-model	2,3
SP-model	-
Wire cross section [mm <sup>2</sup> ]	1
Wire length [mm]	100
Connector included	yes

## Features for both LA1-S and LA1-SP

- Small
- Weather resistant (IP65)
- Withstand 96 hour salt spray test
- Motor with auto reset thermal overload protection
- Self locking acme screw
- Can operate in a large temperature range
- Accepts large input voltage variations
- Maintenance free
- Models with higher load capacity possible on demand

## Features for LA1-S

- End of stroke limit switches
- Six standard strokes

## Features for LA1-SP

- Potentiometer feedback
- Anti rotation mechanism
- Three standard strokes

## Options

- Custom RAL color

## Engineering notes

- No clutch

## Performance table

Max. input speed [rpm]	3000
Max. input torque [Nm]	1,8
Max. end play [mm]	1
Restraining torque [Nm]	–

## Features

- Rugged and robust
- Motor fitted by customer
- Aluminium cover tube with T-slot
- Position sensors can be fitted to the T-slots
- Trunnion mounting possible
- Anti rotation mechanism
- Overload clutch (set to 1,2 – 1,5 × max. permissible load)
- Acme or ball screw drive
- Holding brake prevents back driving on ball screw models
- Acme screw models are self-locking
- Safety nut on all ball screw models
- Maintenance free

## Options

- Hand wind
- Custom RAL color

## Performance table

## Elektrak PPA-DC

- Robust and versatile
- Trunnion to clevis mounting
- 12, 24 or 36 Vdc
- Ball screw driven
- Stroke from 102 to 914 mm
- Speed from 12 to 33 mm/s
- Load up to 6670 N
- Maintenance free
- End of stroke limit switches available as option
- Feedback potentiometer available as option
- Hall effect position sensor available as option

## Elektrak PPA-AC

- Robust and versatile
- Trunnion to clevis mounting
- 110 or 230 Vac power supply
- Ball screw driven
- Stroke from 102 to 914 mm
- Speed from 5 to 15 mm/s
- Load up to 6670 N
- Motor with auto reset thermal overload protection
- Maintenance free
- End of stroke limit switches available as option
- Feedback potentiometer available as option
- Hall effect position sensor available as option

## Technical data

Available input voltages [Vdc]	12, 24 or 36
Available screw types	Ball
Max. static load at fully retracted [N]	13 350
Min. / max. standard stroke [inch]	4 / 36
Duty cycle @ 20° C [%]	30
Temperature limits at operation [°C]	- 25 to + 65
Max. end play [mm]	1
Wire cross section [mm <sup>2</sup> ]	2
Wire length [mm]	400
Connector included	no

## Features

- Robust and versatile
- Overload clutch
- Ball screw drive
- Holding brake prevents back driving
- Can operate in a large temperature range
- Accepts large input voltage variations
- Maintenance free
- Trunnion to clevis mounting

## Options

- Potentiometer feedback
- Hall effect feedback
- End of stroke limit switches
- Protective bellows

## Performance table

– Page intentionally left blank –

## Electrak E050

- Small, low noise and lightweight
- Shortest retracted length in the industry
- Low cost
- Load up to 510 N
- 12, 24 or 36 Vdc power supply
- Stroke from 25 to 200 mm
- Speed up to 48 mm/s
- IP 56
- Overload clutch
- End of stroke limit switches available as option
- Potentiometer feedback available as option

## Electrak Q050

- Share most features and technical data with E050
- Quiet operation
- Speed up to 38 mm/s
- IP 51

## Electrak E150

- Lightweight, flexible and durable
- Load up to 2000 N
- Speed up to 71 mm/s
- 12, 24 or 36 Vdc power supply
- Stroke from 100 to 400 mm
- IP56
- Adjustable end of stroke limit switches available as option
- Potentiometer feedback available as option

## Features

- Lightweight, flexible and durable
- Motor with auto reset thermal overload protection
- Anti rotation mechanism
- Estimated life is min. 40 000 cycles
- Vent tube
- Can operate in a large temperature range
- Speed up to 70 mm/s
- IP56
- Accepts large input voltage variations
- Maintenance free

## Options

- Adjustable end of stroke limit switches
- Potentiometer feedback

## Engineering notes

- No clutch

## Movoact

Height adjustment of work places.

Height adjustment of loading and unloading stations.

Height adjustment of conveyor systems.

- Self supporting lifting column
- Models for or AC or DC supply voltages
- Strong, rugged and reliable
- Extruded aluminium housing
- T-slots along the outer profile
- Ball screw or acme screw
- 12, 24 and 36 Vdc or 1 x 230 and 3 x 400 Vac power supply
- Stroke up to 600 mm
- Speed from 12 to 60 mm/s
- Load up to 6800 N
- High off center load capacity
- Maintenance free
- Options: potentiometer feedback, controls.

## Technical data

	
Available input voltages [Vdc]	12, 24 or 36
Available screw types	Acme or Ball
Max. static load at fully retracted [N]	
Acme screw models	11 350
Ball screw models	18 000
Min. / max. standard stroke [inch]	4 / 24
Duty cycle @ 25° C [%]	25
Temperature limits at operation [°C]	- 25 to + 65
Max. end play [mm]	1
Wire cross section [mm <sup>2</sup> ]	2,5
Wire length [mm]	2000
Connector included	no

## Features

- Rugged and robust
- Overload clutch (set to 1,2 – 1,5 x max. permissible load)
- Motor with auto reset thermal overload protection
- Accepts off center loads up to 700 Nm
- Acme or ball screw drive
- Holding brake prevents back driving on ball screw models
- Acme screw models are self-locking
- Safety nut on all ball screw models
- Can operate in a large temperature range
- Accepts large input voltage variations
- Maintenance free

## Options

- Potentiometer feedback

## LoadMaster 80

- Rodless actuator
- Two versions, for horizontal or vertical operation
- Rigid self supporting aluminium profile
- Quiet operation for indoor domestic or medical use
- Trapezoidal or ball screw drive
- Spring loaded soft stop at end of stroke
- Stroke up to 1500 mm (longer possible upon request)
- Speed up to 110 mm/s
- Load up to 2000 N
- Options such as hand wind, spline safety function and alternative motor positions.

Handicap adaptation of vehicles

Lifting aids for disabled

Patient lifts

Loading and unloading stations
